Waves: sublevel 5

Background:

The behavior of a traveling wave (or pulse) upon reaching the end of a medium is referred to as boundary behavior. When one medium ends, another medium begins; the interface of the two media is referred to as the boundary and the behavior of a wave at that boundary is described as its boundary behavior. A pulse that is approaching a boundary is referred to as the incident pulse. Upon reaching the boundary, a portion of the incident pulse will be reflected and remain in the same medium; and a portion of the incident pulse will pass into (or be transmitted into) the other medium which lies beyond the boundary. The portion of the pulse that is reflected is referred to as the reflected pulse and the portion that passes into the other medium is referred to as the transmitted pulse. A proper understanding of the boundary behavior of waves involves an ability to answer the following questions.

Fixed and Free End Reflections

1. State the rule that describes how a pulse will behave at a free end and a fixed end.
2. Express your understanding of reflection of waves at the end of a medium by drawing the size and orientation of the reflected pulse for the two cases below - reflection off a free end and a fixed end.

Fixed End Reflection

Free End Reflection

Reflection and Transmission of an Incident Pulse at a Boundary Between Two Media

A pulse is moving from a more-dense medium to a less-dense medium as shown in the diagram below.

3. The reflected pulse in medium 1 _____ (will, will not) be inverted because _____.
4. The speed of the transmitted pulse will be _____ (greater than, less than, the same as) the speed of the incident pulse.
5. The speed of the reflected pulse will be _____ (greater than, less than, the same as) the speed of the incident pulse.
6. The wavelength of the transmitted pulse will be _____ (greater than, less than, the same as) the wavelength of the incident pulse.

L'vov, 2012-12-06 WAVE TURBULENCE is a state of a system of many simultaneously excited and interacting waves characterized by an energy distribution which is not in any sense close to thermodynamic equilibrium Such situations in a choppy sea in a hot plasma in dielectrics under arise for example a powerful laser beam in magnets placed in a strong microwave field etc Among the great variety of physical situations in which wave turbulence arises it is possible to select two large limiting groups which allow a detailed analysis The first is fully developed wave turbulence arising when energy pumping and dissipation have essentially different space scales In this case there is a wide power spectrum of turbulence This type of turbulence is described in detail e g in Zakharov et al 1 In the second limiting case the scales in which energy pumping and dissipation occur are the same As a rule in this case a narrow almost singular spectrum of turbulence appears which is concentrated near surfaces curves or even points in k space One of the most important widely investigated and

instructive examples of this kind of turbulence is parametric wave turbulence appearing as a result of the evolution of a parametric instability of waves in media under strong external periodic modulation laser beam microwave electromagnetic field etc The present book deals with parametric wave turbulence **Equadiff 99 (In 2 Volumes) - Proceedings Of The International Conference On Differential Equations** Bernold Fiedler, Konrad Groger, Jurgen Sprekels, 2000-09-05 This
