[Math Scaffolds](#) Avraam Ziogas, 2021-03-24 This book is about secondary degree equations or quadratic equations It is based on an algorithmic method The method is presented with empty boxes that need to be filled with numbers The first two equations are fully solved as an example Then the equations have gradually more and more blank spaces to be filled by the student The blank spaces are here to help with the structure Repetition is used to create a visual pattern that will be converted to a mental pattern The existing numbers tend to serve as guidelines at the first equations and then they transform to checkpoints or pointers of different or difficult points Gradually the equations

become more challenging Chapter 1 Equations are presented fully solved and then gradually more blank spaces are introduced Chapter 2 Students can solve equations with coefficient a of the second degree term different than 1 Chapter 3 Equations without solutions are introduced Chapter 4 Equations are repeated and the scaffold is getting more discreet Chapter 5 Equations are repeated and the scaffold is disappearing leaving only the basic formulas in place Chapter 6 This chapter has all the calculations needed for all the equations of the book Additions subtractions multiplications squares and roots are listed here to be referenced if needed Recommendation Read the first fully solved equations with a critical eye Color with colored markers the coefficients a b and c and track them in the solved equations Students with special educational needs Students should work on this material with the help of an assistant familiar with the material Let the students find patterns in the first solved equations Support them but also let them guess or speculate for the answers even if they are not sure Goals Learn to solve quadratic equations Build confidence in the student's abilities Overcome the psychological barrier of low performance Give the students the opportunity to feel small successes Who should use this book Students homeschooling Students who missed the related material at school Students with special education needs supported by a qualified supporter Teachers who want to differentiate their lesson's structure Teachers can use the book for revisions or as material for substitute teachers Substitute teachers for short or longer periods of time

BEYOND THE QUADRATIC FORMULA RON IRVING., 2020 *Quadratic equations*, 1985 A Learning Trajectory for Intermediate Algebra Students Transitioning from Solving Linear Equations to Factorable Quadratic Equations Silvia Anel Madrid Jaramillo, 2021 Research on learning quadratic equations reports students difficulties with procedural fluency and conceptual understanding of standard methods for solving such equations There is little research on how to support students mathematical development for factorable quadratic equations without using the concept of function and function notation I investigated how students may develop connections between essential concepts for solving factorable quadratic equations starting from their current conception of solving linear equations To achieve this I conducted a design research study Based on the pilot's data analysis I proposed key developmental understandings KDUs M A Simon's construct for students learning to solve factorable quadratic equations These KDUs informed the two subsequent iterative cycles through which I developed a hypothetical learning trajectory HLT for supporting students understanding of this topic In each cycle I prepared a HLT including goals mathematical tasks and hypotheses conducted individual task based interviews and used qualitative methods to analyze participants engagement with and reasoning during the tasks I interviewed 12 university students enrolled in an intermediate algebra course The data analysis was based on comparing the

anticipated and observed learning trajectories This study contributes a HLT and an explanatory framework for supporting students in developing a richer understanding of solving factorable quadratic equations I incorporated two perspectives of solutions to a linear or quadratic equation symbolically as numbers that satisfy an equation e g $ax^2 + bx + c = 0$ and graphically as the x coordinate s of the x intercept s of the corresponding graph e g $y = ax^2 + bx + c$ The instructional tasks in this trajectory offer students opportunities for subtle but crucial conceptual transitions as they engage their prior knowledge of linear equations develop an intuitive understanding of why the method of factoring works understand how many solutions a linear or quadratic equation may have notice the algebraic structure of a factored equation and understand how the zero product property applies to solving factorable quadratic equations The data analysis shows that the proposed HLT is viable The account of how participants engaged with the tasks and interacted with the researcher illustrates how teachers may probe and guide students towards reflecting on their mathematical activity and understanding of this topic
