ARTIFICIAL NEURAL NETWORKS B. YEGNANARAYANA, 2009-01-14 Designed as an introductory level textbook on Artificial Neural Networks at the postgraduate and senior undergraduate levels in any branch of engineering this self contained and well organized book highlights the need for new models of computing based on the fundamental principles of neural networks Professor Yegnanarayana compresses into the covers of a single volume his several years of rich experience in teaching and research in the areas of speech processing image processing artificial intelligence and neural networks He gives a masterly analysis of such topics as Basics of artificial neural networks Functional units of artificial neural networks for pattern recognition tasks Feedforward and Feedback neural networks and Architectures for complex pattern recognition tasks Throughout the emphasis is on the pattern processing feature of the neural networks Besides the presentation of real world applications provides a practical thrust to the discussion *Neural Networks and Deep Learning* Charu C. Aggarwal, 2018-08-25 This book covers both classical and modern models in deep learning The primary focus is on the theory and algorithms of deep learning The theory and algorithms of neural networks are particularly important for understanding important concepts so that one can understand the important design concepts of neural architectures in different applications Why do neural networks work When do they work better than off the shelf machine learning models When is depth useful Why is training neural networks so hard What are the pitfalls The book is also rich in discussing different applications in order to give the practitioner a flavor of how neural architectures are designed for different types of problems Applications associated with many different areas like recommender systems machine translation image captioning image classification reinforcement learning based gaming and text analytics are covered The chapters of this book span three categories The basics of neural networks Many traditional machine learning models can be understood as special cases of neural networks An emphasis is placed in the first two chapters on understanding the relationship between traditional machine learning and neural networks Support vector machines linear logistic regression singular value decomposition matrix factorization and recommender systems are shown to be special cases of neural networks These methods are studied together with recent feature engineering methods like word2vec Fundamentals of neural networks A detailed discussion of training and regularization is provided in Chapters 3 and 4 Chapters 5 and 6 present radial basis function RBF networks and restricted Boltzmann machines Advanced topics in neural networks Chapters 7 and 8 discuss recurrent neural networks and convolutional neural networks Several advanced topics like deep reinforcement learning neural Turing machines Kohonen self organizing maps and generative adversarial networks are introduced in Chapters 9 and 10 The book is written for graduate students researchers and practitioners Numerous exercises are available along with a solution manual to aid in classroom teaching Where possible an application centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques **Artificial Neural Networks and Machine Learning - ICANN 2017**

Levine, Wesley R. Elsberry, 2013-06-17 This book is the third in a series based on conferences sponsored by the Metroplex Institute for Neural Dynamics an interdisciplinary organization of neural network professionals in academia and industry The topics selected are of broad interest to both those interested in designing machines to perform intelligent functions and those interested in studying how these functions are actually performed by living organisms and generate discussion of basic and controversial issues in the study of mind The topic of optimality was chosen because it has provoked considerable discussion and controversy in many different academic fields There are several aspects to the issue of optimality First is it true that actual behavior and cognitive functions of living animals including humans can be considered as optimal in some sense Second what is the utility function for biological organisms if any and can it be described mathematically Rather than organize the chapters on a biological versus artificial basis or by what stance they took on optimality it seemed more natural to organize them either by what level of questions they posed or by what intelligent functions they dealt with The book begins with some general frameworks for discussing optimality or the lack of it in biological or artificial systems The next set of chapters deals with some general mathematical and computational theories that help to clarify what the notion of optimality might entail in specific classes of networks The final section deals with optimality in the context of many different high level issues including exploring one s environment understanding mental illness linguistic communication and social organization The diversity of topics covered in this book is designed to stimulate interdisciplinary thinking and speculation about deep problems in intelligent system organization Artificial Neural Networks and Machine Learning -

Proceedings of ELM-2017 Jiuwen Cao,Chi Man Vong,Yoan Miche,Amaury Lendasse,2018-10-16 This book contains some selected papers from the International Conference on Extreme Learning Machine ELM 2017 held in Yantai China October 4 7 2017 The book covers theories algorithms and applications of ELM Extreme Learning Machines ELM aims to enable pervasive learning and

pervasive intelligence As advocated by ELM theories it is exciting to see the convergence of machine learning and biological learning from the long term point of view ELM may be one of the fundamental learning particles filling the gaps between machine learning and biological learning of which activation functions are even unknown ELM represents a suite of machine and biological learning techniques in which hidden neurons need not be tuned inherited from their ancestors or randomly generated ELM learning theories show that effective learning algorithms can be derived based on randomly generated hidden neurons biological neurons artificial neurons wavelets Fourier series etc as long as they are nonlinear piecewise continuous independent of training data and application environments Increasingly evidence from neuroscience suggests that similar principles apply in biological learning systems ELM theories and algorithms argue that random hidden neurons capture an essential aspect of biological learning mechanisms as well as the intuitive sense that the efficiency of biological learning need not rely on computing power of neurons ELM theories thus hint at possible reasons why the brain is more intelligent and effective than current computers This conference will provide a forum for academics researchers and engineers to share and exchange R D experience on both theoretical studies and practical applications of the ELM technique and brain learning It gives readers a glance of the most recent advances of ELM
