Statistical Mechanics Made Simple: A Guide For Students And Researchers Daniel C Mattis, 2003-04-08 This book is an elaboration of the author's lecture notes in a graduate course in statistical physics and thermodynamics augmented by some material suitable for self teaching as well as for undergraduate study The first 4 or 5 chapters are suitable for an undergraduate course for engineers and physicists in Thermodynamics and Statistical Physics and include detailed study of the various ensembles and their connections to applied thermodynamics The Debye law of specific heats and reasons for deviations from the Debye formulas are covered as are the Einstein theories of Brownian motion black body radiation and specific heat of solids Van der Waals gases and the reason for the apparent failure of his Law of Corresponding States are discussed The last 5 chapters treat topics of recent interest to researchers including the Ising and Potts models spin waves in ferromagnetic and anti ferromagnetic media sound propagation in non ideal gases and the decay of sound waves introduction to the understanding of glasses and spin glasses superfluidity and superconductivity The selection of material is wide ranging and the mathematics for handling it completely self contained ranging from counting probability theory to quantum field theory as used in the study of fermions bosons and as an adjunct in the solutions of the equations of classical diffusion reaction theory In addition to the standard material found in most recent books on statistical physics the constellation of topics covered in this text includes numerous original items Generalization of negative temperature to interacting spins Derivation of Gibbs factor from first principles Exact free energy of interacting particles in 1D e g classical and quantum Tonks gas Introduction to virial expansions Equations of State Correlation Functions and critical exponents Superfluidity in ideal and non ideal fluids both Bogolubov and Feynman theories Superconductivity thermodynamical approach and the BCS theory Derivation of Central Limit Theorem and its applications Boltzmann's H Theorem and the nonlinear Boltzmann equation Exact solution of nonlinear Boltzmann Equation for electrons in time dependent electric field and the derivation of

Joule heating transport parameters in crossed electric and magnetic fields etc Frequency spectrum and decay of sound waves in gases Exact evaluation of free energy and thermodynamic properties of the two dimensional Ising model in regular and fully frustrated spin glass like lattices The zipper model of crystal fracture or polymer coagulation calculation of T_c Potts model in 2D duality and T_c Doi s theory of diffusion limited chemical reactions with some exact results including the evaluation of statistical fluctuations in radioactive decay Thermodynamic Green Functions and their applications to fermions and bosons with an example drawn from random matrix theory and much more

Elementary Lectures in Statistical Mechanics George D.J. Phillies, 2012-12-06 This volume is based on courses on Statistical Mechanics which I have taught for many years at the Worcester Polytechnic Institute My objective is to treat classical statistical mechanics and its modern applications especially interacting particles correlation functions and time dependent phenomena My development is based primarily on Gibbs s ensemble formulation Elementary Lectures in Statistical Mechanics is meant as a relatively sophisticated undergraduate or relatively straightforward graduate text for physics students It should also be suitable as a graduate text for physical chemistry students Physicists may find my treatment of algebraic manipulation to be more explicit than some other volumes In my experience some of our colleagues are perhaps a bit over enthusiastic about the ability or tendency of our students to complete gaps in the derivations I emphasize a cyclic development of major themes I could have begun with a fully detailed formal treatment of ensemble mechanics as found in Gibbs s volume and then given material realizations I instead interleave formal discussions with simple concrete models The models illustrate the formal definitions The approach here gives students a chance to identify fundamental principles and methods before getting buried in ancillary details
