Cooperative Work in Design IV Weiming Shen, Jianming Yong, Yun Yang, Jean-Paul A. Barthès, Junzhou Luo, 2008-12-18

Design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple sophisticated commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and independently with various engineering tools which are located on different sites often for quite a long period of time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of details In order to meet these requirements it is necessary to have efficient computer supported collaborative design systems These systems should not only automate individual tasks in the manner of traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project Based on close international collaboration between the University of Technology of Compiègne in France and the Institute of Computing Technology of the Chinese Academy of Sciences in the early 1990s a series of international workshops on CSCW in Design started in 1996 In order to facilitate the organization of these workshops an International Working Group on CSCW in Design CSCWD was established and an International Steering Committee was formed in 1998 The series was converted to international conferences in 2000 building on the success of the four previous workshops Embedded SoPC Design with Nios II Processor and VHDL Examples Pong

P. Chu, 2011-09-26 The book is divided into four major parts Part I covers HDL constructs and synthesis of basic digital circuits Part II provides an overview of embedded software development with the emphasis on low level I/O access and drivers Part III demonstrates the design and development of hardware and software for several complex I/O peripherals including PS2 keyboard and mouse a graphic video controller an audio codec and an SD secure digital card Part IV provides

three case studies of the integration of hardware accelerators including a custom GCD greatest common divisor circuit a Mandelbrot set fractal circuit and an audio synthesizer based on DDFS direct digital frequency synthesis methodology The book utilizes FPGA devices Nios II soft core processor and development platform from Altera Co which is one of the two main FPGA manufactures Altera has a generous university program that provides free software and discounted prototyping boards for educational institutions details at www.altera.com/university The two main educational prototyping boards are known as DE1 99 and DE2 269 All experiments can be implemented and tested with these boards A board combined with this book becomes a turn key solution for the SoPC design experiments and projects Most HDL and C codes in the book are device independent and can be adapted by other prototyping boards as long as a board has similar I O configuration
