

Ecology: Final Exam Study Guide

This study guide includes key concepts, definitions, and examples to help you succeed on the Ecology Final Exam. However, this resource cannot be used verbatim for the exam. The examples provided

1. Carrying Capacity

- **Definition:** The largest number of individuals of a species that an environment can support based on available resources.
 - **Example:** A forest can only support a certain number of deer due to limited food and space. If the population grows beyond what can be supported, some will starve or migrate.
-

2. Population Growth and Limiting Factors

- **Exponential Growth:** Is a rapid, unrestrained growth of a population where there are no limits (e.g., when a species is introduced to a new area).
 - **Logistic Growth:** Is a S-shaped curve that shows population growth slowing as it nears the carrying capacity.
 - **Limiting Factors:**
 - **Density-dependent:** Factors that depend on population size, such as competition, disease, and predation.
 - **Density-independent:** Factors that affect a population regardless of size (like natural disasters).
-

3. Biotic Interactions

- **Predation:** One organism kills and eats another organism (e.g., a wolf eating a rabbit).
- **Competition:**
 - **Intraspecific:** Competition between individuals of the same species (e.g., two lions fighting for food).
 - **Interspecific:** Competition between individuals of different species (e.g., a hawk and a falcon competing for prey).
