 Postpartum-

Fertilization and Implantation

Fertilization:

Occurs in the upper region of the fallopian tubes within 12 hours of ovulation and 2 to 3 days of insemination, the average durations of viability for the ovum and sperm, respectively.

Once the ovum is fertilized, its membrane undergoes changes that prevent the entry of other sperm.

Sperm carry an X and a Y chromosome: XY is male, XX female.

Implantation:

The zygote propels itself down the fallopian tube, toward the uterus.

Implantation in the uterine wall occurs 6 to 10 days after ovulation.
