Study Guide

1. DNA: The Genetic Material
 - DNA (deoxyribonucleic acid) is the genetic material that carries the instructions for building and maintaining an organism.
 - It is composed of two long strands forming a double helix structure, composed of nucleotides.
 - Nucleotides consist of a sugar (deoxyribose), a phosphate group, and a nitrogenous base (Adenine, Thymine, Guanine, or Cytosine).
 - DNA contains the genetic instructions necessary for the growth, development, functioning, and reproduction of organisms.
2. Replication of DNA
 - DNA replication is the process by which a cell makes an identical copy of its DNA.
 - It occurs during the S phase of the cell cycle.
 - The process is semi-conservative, meaning each new DNA molecule consists of one original strand and one newly synthesized strand.
 - Synthesis of DNA begins at a specific point called the origin of replication, where DNA polymerase and other enzymes facilitate the synthesis of new DNA strands.
 - The result is two identical DNA molecules, each containing one original strand and one newly synthesized strand.
3. DNA, RNA, and Protein
 - DNA serves as the template for the synthesis of RNA molecules within a process called transcription.
 - RNA is single-stranded and carries the genetic information from DNA to the ribosome, where proteins are synthesized.
 - There are three main types of RNA: messenger RNA (mRNA), transfer RNA (tRNA), and ribosomal RNA (rRNA).
 - mRNA carries the genetic information from DNA to the ribosome, where proteins are synthesized.
 - tRNA molecules carry amino acids to the ribosome during protein synthesis. Each tRNA has a specific anticodon that pairs with a complementary codon on the mRNA.
 - rRNA molecules form the structural framework of the ribosome, where proteins are synthesized.
 - Some organisms have viruses that use RNA as their genetic material, which can then be translated into proteins and other molecules.
 - Mutations in DNA can lead to changes in the genetic code, which can result in the production of faulty proteins and potentially lead to genetic disorders or cancer.
