Hydrology and Management Saeid Eslamian, Faezeh Eslamian, 2023-05-31 Ever increasing population growth has caused a proportional increased demand for water and existing water sources are depleting day by day Moreover with the impact of climate change the rates of rainfall in many regions have experienced a higher degree of variability In many cities government utilities have been struggling to maintain sufficient water for the residents and other users The Handbook of Irrigation Hydrology and Management Irrigation Methods examines and analyzes irrigated ecosystems in which water storage applications or drainage volumes are artificially controlled in the landscape and the spatial domain of processes varies from micrometers to tens of kilometers while the temporal domain spans from seconds to centuries The continuum science of irrigation hydrology includes the surface subsurface unsaturated and groundwater systems atmospheric and plant subsystems Further the book addresses the best practices for various types of irrigation methods including pressure smart surface and subsurface and presents solutions for water scarcity and soil salinity in irrigation Features Offers water saving strategies to increase the judicious use of scarce water resources Presents strategies to maximize agricultural yield per unit of water used for different regions Compares irrigation methods to offset changing weather patterns and impacts of climate change *The National Agricultural Directory 2009*, 2009 Modernisation Strategy for National Irrigation Systems in the Philippines Mona Liza Delos Reyes, 2017-07-12 The book presents documentary evidence of the insufficiency of rehabilitation works to close the gap between the irrigation service and actual area irrigated of publicly funded national irrigation systems in the Philippines It outlines a methodology for formulating a modernisation plan for national irrigation systems with focus on

the mostly ungauged medium to small canal irrigation systems The proposed methodology adaptively modified some known modernisation concepts and techniques and integrated them in a more holistic framework in the context of changing weather patterns and river flow regimes It includes in depth review of rehabilitation works system diagnosis revalidation of design assumptions on percolation and water supply characterisation of system management irrigation service and demand and drawing up of options and a vision for the modernised irrigation systems Central to the proposed modernisation strategy is the logical coherence among the design of physical structures system operation and water supply so that improvements of irrigation service are possible The book discusses the development of the proposed methodology and demonstrates its utility in two case study irrigation systems
